

# ARGENTA – MORROW REBUILD PROJECT

ITC Michigan, through its Michigan Electric Transmission Company, LLC (METC) subsidiary, is upgrading electricity transmission infrastructure in Allegan and Kalamazoo Counties. METC will rebuild approximately 10.5 miles of its Argenta – Morrow 138,000 volt (138 kV) transmission line, replacing the existing structures with new double-circuit monopoles designed for higher-rated conductor (wire). Construction will begin in Q3 2020 and be completed in Q4 2020.

ITC is committed to serving customers and communities by providing safe, secure, reliable electricity transmission service to meet their needs. ITC’s approach to transmission infrastructure development takes into consideration the unique nature of every project. Projects are assessed individually for safety, reliability, cost-effectiveness, environmental impacts and community impacts to determine the best transmission solution for each project.

The Argenta – Morrow Rebuild Project is an example of ITC’s ongoing commitment to the operational efficiency and reliability of Michigan’s high-voltage transmission grid. The company has invested \$5 billion in capital project maintenance and transmission infrastructure improvements in Michigan since 2003. These investments are improving the reliability and safety of the transmission infrastructure while ensuring its ability to meet new energy demands.

ITC Holdings Corp., through subsidiaries ITC *Transmission* and Michigan Electric Transmission Company, LLC (METC), owns and maintains more than 8,700 circuit miles of high-voltage electric lines and 283 transmission stations and substations throughout Michigan’s Lower Peninsula. As the nation’s largest independent electric transmission company, ITC focuses solely on electric transmission to enhance reliability, relieve electric transmission congestion and connect all energy resources, including renewables, to customers in a non-discriminatory manner. ITC has been making significant investments in Michigan’s transmission grid to improve reliability, safety and efficiency and lower the overall cost of delivered energy.

The new Argenta – Morrow double-circuit monopoles will be similar to the one shown here.
